PROBLEM

AI can't touch Korean apps

Global agents fall short

AI agents like OpenClaw and Operator **cannot access Korean mobile apps.** Baemin, KakaoT, CatchTable are all app-only.

Daily manual repetition

Hailing taxis, ordering delivery, booking restaurants **every day** by opening apps, searching, tapping, and paying.

REAL CASE

"Ordering team lunch delivery"

1. Collect menu picks
2. Open the app
3. Add items one by one
4. **Manually pay and confirm**

SOLUTION

Let DDalkkak handle it for you

Speak naturally → AI controls **real mobile apps** to complete transactions

USER
"Order delivery"

→

INTENT PARSER
Claude LLM

→

ROUTER
Service Select

→

ANDROID
App Control

Differentiator

Controls **real mobile apps**, not browsers. Most Korean services are mobile-only.

Core Stack

Python + **Droidrun SDK** + Android Emulator + ADB for both real devices and emulators.

USE CASES

6 Categories, 11 Services Routed

🛒 **Shopping**

"Order shampoo for me"

Coupang · Naver Shopping

🍔 **Delivery**

"Get me dinner delivery"

Baemin · Coupang Eats

🚕 **Mobility**

"Get me a taxi"

KakaoT

✈️ **Travel**

"Book a Jeju stay"

Yanolja · Yeogi · Naver

🍽️ **Reservation**

"Book a restaurant"

CatchTable · Naver Booking

🎁 **Gifting**

"Send fruit to my parents"

Kakao Gift · Coupang · Naver

Natural language → Intent Parsing → Automatic optimal service selection

DEMO

Live Demo — 2 Scenarios

🚕

KakaoT

Set destination → Hail taxi → Wait for dispatch → Cancel, all automated by AI agent in-app

🍔

Baemin

Pick food → Add to cart → Place order → Cancel, all automated by AI agent in-app

All scenarios are recorded videos of the AI agent autonomously operating real apps.

PIVOT

Lessons Learned

PLAN A — Original

Minitap SDK + Physical iPhone

Control a physical iOS device via USB + WDA to automate apps directly

- ✗ SDK stability issues discovered
- ✗ Unstable connection, repeated session drops

→

PLAN B — Pivoted 1 hour ago

Droidrun SDK + Android Emulator

Connect Android emulator/device via ADB, Droidrun Agent autonomously controls UI

- ✓ Stable connection, rapid prototyping
- ✓ CatchTable reservation E2E verified

Takeaway: A platform-agnostic automation layer is key. The intent parsing and routing logic transferred directly from iOS to Android.
